

Abstract of the Disclosure

5 | A tape cassette storing case for storing a tape cassette comprises a
cubic body with lateral walls, a lid body with lateral walls, and a junction
member constituting one of the lateral walls of the lid body in linkage with the
10 | cubic body and the lid body via hinging means; and a pair of cylindrical
members are vertically disposed on a bottom plate of the cubic body by way
of being idly inserted in hub holes of a tape-supplying and tape take-up reel;
wherein each of the hub holes comprises; a driving pawl hole having an inner
peripheral surface formed with a reel-driving pawl, and a reference hole ~~which~~
10 | that is formed in concentricity with the driving pawl hole and provided with
~~such~~ a diameter smaller than that of the driving pawl hole; and the pair of
cylindrical members are respectively formed to be of ~~such~~ a height enough to
arrive at the reference hole.
